MADERA

La madera utilizada en los bancos proviene de bosques con certificación de gestión forestal sostenible mediante proveedores cuya cadena de custodia está certificada.

Según modelos, madera tropical con certificado FSC, o Pino Rojo del Norte con tratamiento en autoclave certificado a nivel 4, según normativa EN351-2, ambas acabadas con protector láser a poro abierto. Soportes fabricados en acero de alta calidad con distintos acabados y tratamiento.

MADERA TÉCNICA

La madera técnica es un material innovador diseñado para resistir las condiciones urbanas más exigentes. Compuesta por fibras de madera y resinas de alta calidad, ofrece gran estabilidad, alta resistencia y una durabilidad superior a la de la madera natural, reduciendo deformaciones, grietas y desgaste.

Gracias a sus propiedades mejoradas, es altamente resistente a la humedad, los rayos UV, el fuego y los insectos, asegurando una larga vida útil con un mantenimiento mínimo. Disponible en diversos acabados y formatos, combina la estética natural de la madera tradicional con un rendimiento excepcional, siendo ideal para bancos, papeleras y otros elementos de mobiliario urbano.

SERIE RECICLADO

El plástico reciclado es la última innovación en materiales para el mobiliario urbano. Su resistencia a la intemperie y al vandalismo es muy superior a la madera, reduciendo el mantenimiento y su coste al mínimo.

Se obtiene a partir de plástico procedente de la recogida selectiva de residuos, fundamentalmente de botellas de leche, mediante procesos de extrusión de plástico para la obtención de listones. Es 100% reciclado y reciclable, formado únicamente por polietileno de alta densidad (HDPE). Es una inversión en un producto respetuoso con el medioambiente, sin duda el mobiliario urbano del futuro.

ENG

WOOD

The wood used to make the benches comes from forests certified for sustainable forest management through suppliers whose chain of custody is certified.

Depending on the models, tropical wood with FSC certificate or selected Northern Red Pine (Pinus Sylvestris), V quality, vacuum pressure treated, certified at P4 level according to EN351-2 regulations, and with open pore protector finish. The supports are made of high quality steel with different treatments and finishes.

TECHNICAL WOOD

Technical wood is an innovative material designed to withstand the most demanding urban conditions. Made from high-quality wood fibers and resins, it offers excellent stability, increased resistance, and superior durability compared to natural wood, reducing warping, cracking, and wear.

With its enhanced properties, it resists moisture, UV rays, fire, and insects, ensuring a long lifespan with minimal maintenance. Available in various finishes and formats, it combines the natural aesthetic of traditional wood with superior performance, making it ideal for benches, waste bins, and other urban furniture elements.

RECYCLED SERIES

Recycled plastic is the latest innovation in materials for street furniture. Its resistance to weather and vandalism is much higher than that of wood, thus reducing maintenance and its cost to a minimum.

Obtained from plastic from selective waste collection, mainly from milk bottles by plastic extrusion processes in order to obtain slats. It is 100 % recycled and recyclable, made up exclusively of high density polyethylene (HDPE). It is an investment in an environmentally friendly product, no doubt the street furniture of the future.

FRA

BOIS

Le bois utilisé sur les bancs provient de forêts avec certification de gestion forestière durable à travers des fournisseurs dont la chaîne de traçabilité est certifiée.

Selon les modèles, nous utilisons du bois tropical certifié FSC, ou du Pin Rouge du Nord (Pinus Sylvestris) avec traitement en autoclave certifié niveau P4, selon la norme EN351-2, tous les deux avec finition lasure à pores ouverts. Supports fabriqués en acier de haute qualité avec différents traitements et finitions.

BOIS TECHNIQUE

Le bois technique est un matériau innovant conçu pour résister aux conditions urbaines les plus exigeantes. Composé de fibres de bois et de résines de haute qualité, il offre une grande stabilité, une résistance accrue et une durabilité supérieure au bois naturel, réduisant déformations, fissures et usure.

Grâce à ses propriétés améliorées, il résiste à l'humidité, aux UV, au feu et aux insectes, assurant une longue durée de vie avec peu d'entretien. Disponible en divers finis et formats, il allie l'esthétique du bois traditionnel à des performances optimales, idéal pour bancs, poubelles et autres éléments de mobilier urbain.

SÉRIE RECYCLÉ

Le plastique recyclé est la dernière innovation en matériaux pour le mobilier urbain. Sa résistance aux intempéries et contre le vandalisme est très supérieure à celle du bois, réduisant l'entretien à un coût minimal.

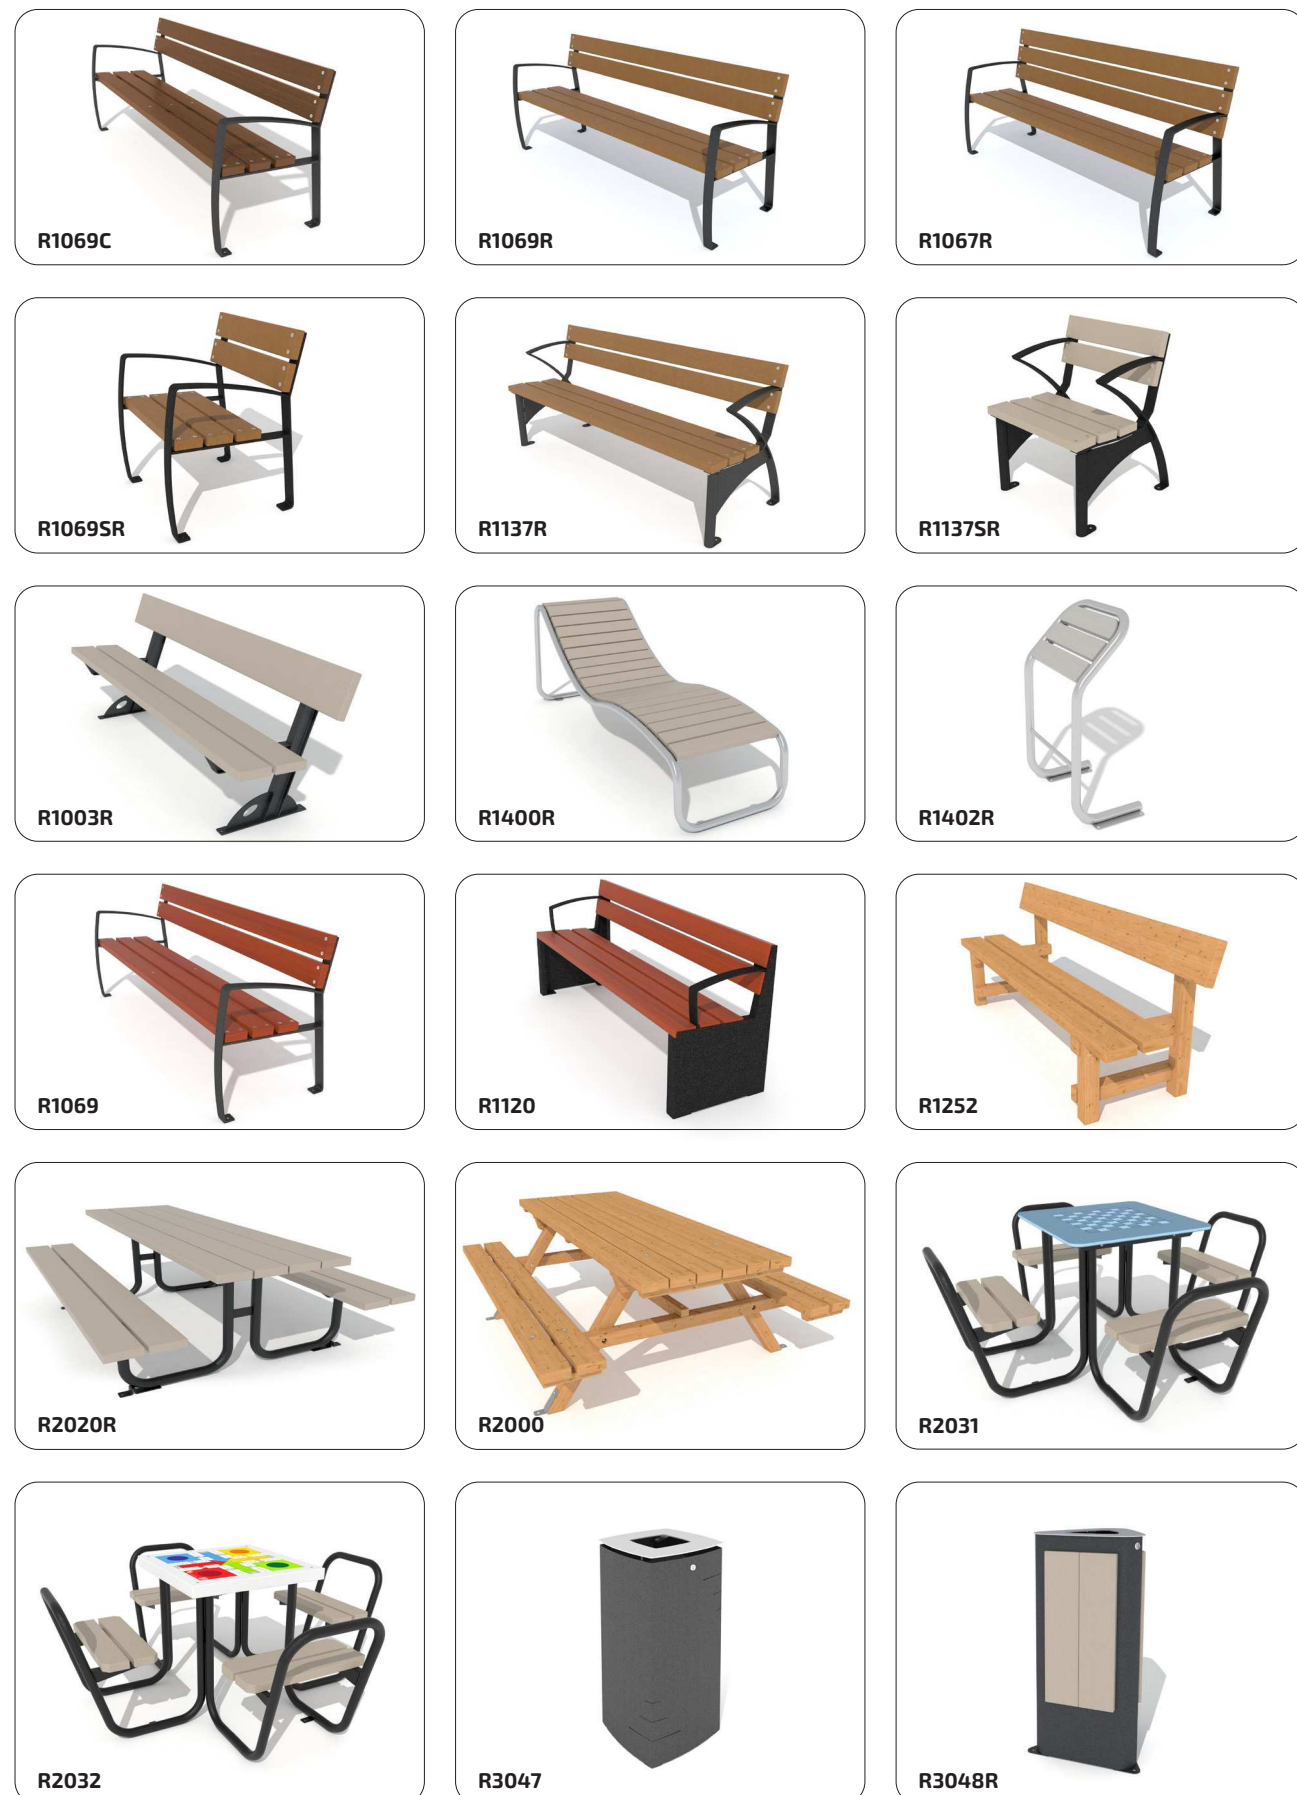

Il est obtenu à partir de plastique provenant du ramassage sélectif de résidus, principalement de bouteilles de lait, suivant des processus d'extrusion de plastique pour l'obtention de lattes. Il est 100% recyclé et recyclable, composé uniquement de polyéthylène haute densité (HDPE). C'est un investissement dans un produit respectueux de l'environnement, sans aucun doute, le mobilier urbain du futur.
